Your paper, entitled **Ex-Vivo Graft Preservation with Hydrogen Sulfide and Hydrogen Iodide for Suspended Animation of Non-Human Primate (Macaca Mulatta) Upper Extremity Vascularized Composite Allotransplants** presented at/published to **Association of Surgeons Great Britain and Ireland 11-13 May 2016** with MDWI 41-108, and has been assigned local file #16192.
2. Pertinent biographic information (name of author(s), title, etc.) has been entered into our computer file. Please advise us (by phone or mail) that your presentation was given. At that time, we will need the date (month, day and year) along with the location of your presentation. It is important to update this information so that we can provide quality support for you, your department, and the Medical Center commander. This information is used to document the scholarly activities of our professional staff and students, which is an essential component of Wilford Hall Ambulatory Surgical Center (WHASC) internship and residency programs.

Disclaimer

The views expressed are those of the authors and do not reflect the official view or policy of the Department of Defense, Department of the Army, Department of the Air Force or its Components.

The experiments reported herein were conducted according to the principles set forth in the National Institute of Health Publication 80-23, Guide for the Care and Use of Laboratory Animals and the Animal Welfare Act of 1966, as amended

Background

Surviving soldiers from battlefield injuries are presenting with more complex wound patterns in the extremities and face.

Vascularized composite allotransplantation (VCA)

Challenges in vascularized composite allotransplantation (VCA)

100% survival of recipient arm
100% survival of donor hand
100% survival of recipient arm
100% survival of donor hand

- Requires systemic immunosuppression
- Skin is a primary target for rejection
- Limited donor pool
- Few indications
- Shorter period for ischemia time
- Ischemic reperfusion injury

Current Standard of Care for Organ Transplants

Hydrogen Sulfide (H_2S)

H_2S Induces a Suspended Animation-Like State in Mice

DOI: 10.1126/science.1108581

- Reversibly reduce the metabolic rate of mice exposed to 80 ppm of hydrogen sulfide
- Core temperature reduced as much as 11°
- Animals in this state for 6 hours and they recover completely

Method

1. UW
2. UW and H₂S
3. UW and HI

Conclusions

- H₂S may play a role in mitigating onset of acute rejection in porcine VCA model in the absence of immunosuppression
- Potential use for graft preservation strategies in a clinical setting that may require prolonged ischemic periods

Thank You
